QUOVA PERFORMANCE

ARCHITECTURAL COVE LIGHTING

Unmatched Performance

Up to 900 lm/ft of output and 450 cd peak intensity at CRI 98. Proprietary asymmetric optic focuses light with high peak intensity, ensuring uniform illumination across ceilings. QUOVA Performance's adjustable assembly allows the beam to be adjusted to throw the light where it's needed.

Compact Design

At half the height of traditional cove fixtures, it enables the shallowest cove details without performance loss. Install at 12" from the ceiling for optimal push of light across the ceiling, and 6" from the ceiling when tight architectural details are required.

Seamless Installation

QUOVA Performance can be specified in 2" increments, allowing for precise illumination. Seamless feed details ensure no visible shadowing at feed and passthrough locations.

Effortless Maintenance

Centralized power distribution reduces long-term service disruptions and enhances dimming performance across protocols.
